HOW A PC IS USED IN A OFFICE

When you are in an office your Computer is the most important tool, When businesses perform services and/or provide goods to other companies they only make their money when they send a bill to companies. I will be using a computer to send invoices to customers so they know how much to pay me.y text

SPEED

SPEED VS PORTABILITY

My computer needs to be heavily focused on Speed, it needs to be able to process many applications at the same time as well as have many tabs open in the background .
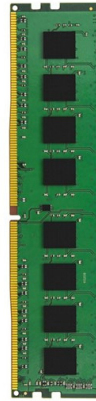

Top 3 componenets

I will need a strong and powerful motherboard
I will need a ssd so the computer is faster
A nice keyboard and mouse since I will be typing and clicking all the time

---

WOULD BE NICE

32 GB DDR4 Ram
I9-9900 processor
3 Monitor Setup

intel
CORE i9
X-series

I will use the stock power supply that comes with the computer since I will not be doing any hardcore gaming so a low voltage power supply would be fine.
I will not overspend on a PC case since it is just going to be aesthetically please although it also offers better air flow I will not need that.

Budget PC BUild

- AMD FX-6300 3.5 GHz 6-Core Processor ($125)
- Asus M5A78L-M/USB3 Micro ATX AM3+ Motherboard ($189)
- ADATA XPG V1.0 16 GB (2 x 8 GB) DDR3-1600 Memory
